

An aerial photograph of a landscape architecture model. The model features a central stream with a stone-lined bank on the left and a large, rustic building with a thatched roof on the right. The landscape is populated with numerous small, yellow-green trees and shrubs. A small, light-colored object, possibly a bird or a hat, is visible on the ground near the building. The background shows a blue sky and a distant horizon.

Central Coast Owls Campus

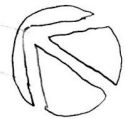

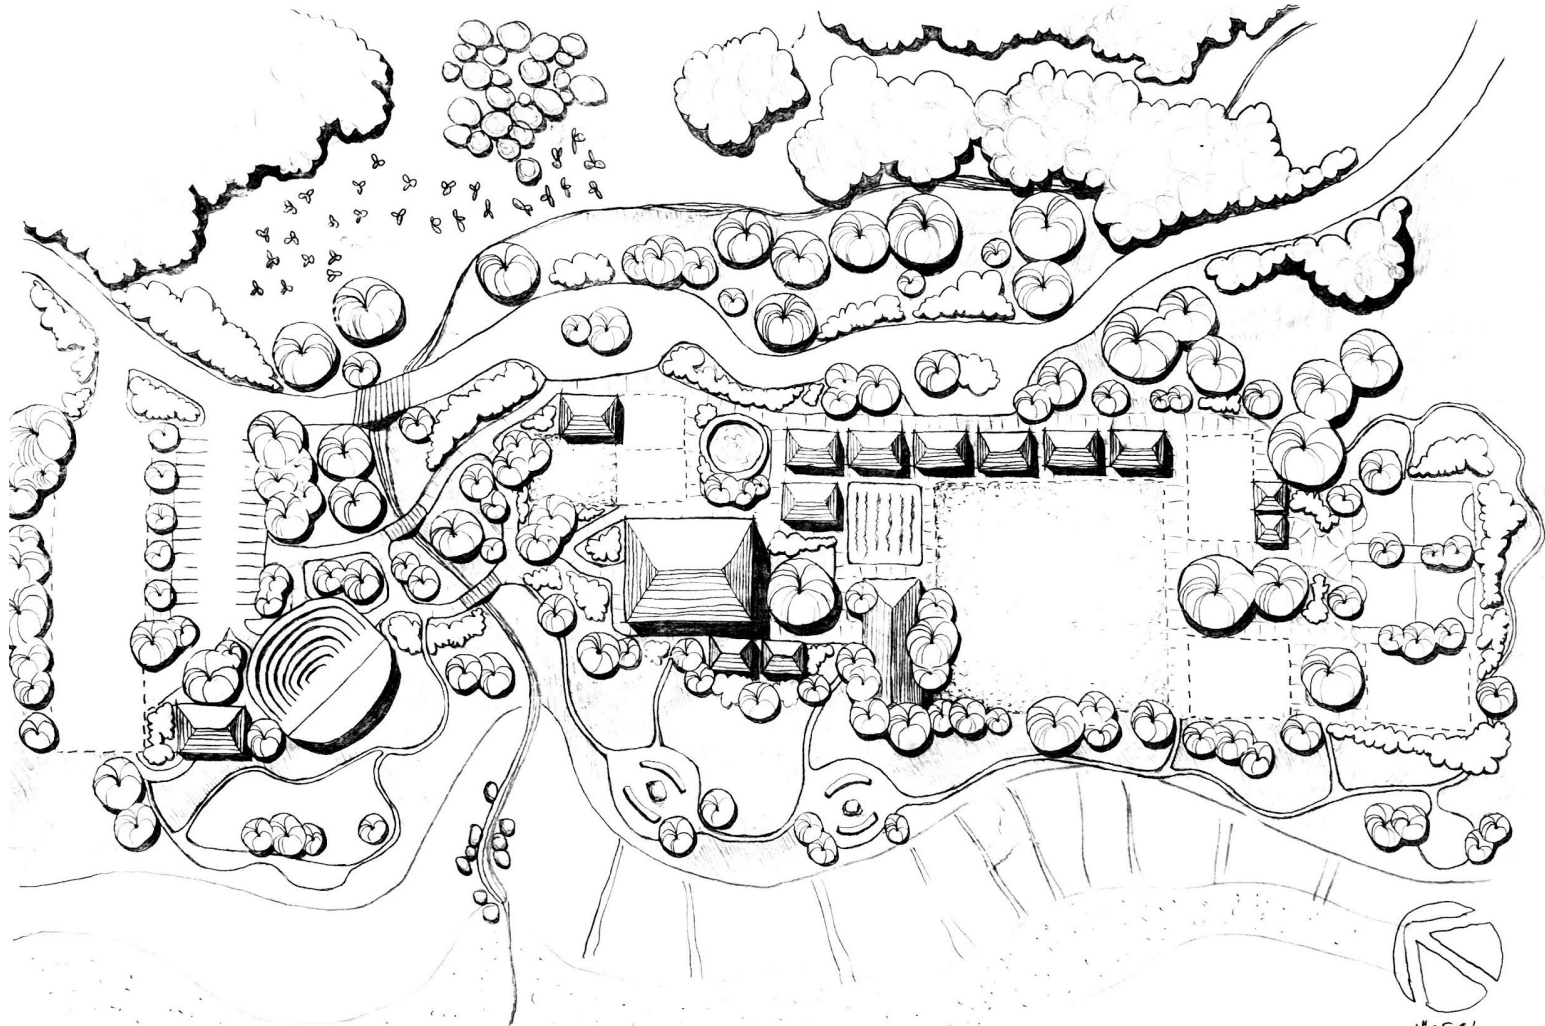

A raptor's ramble

Project overview

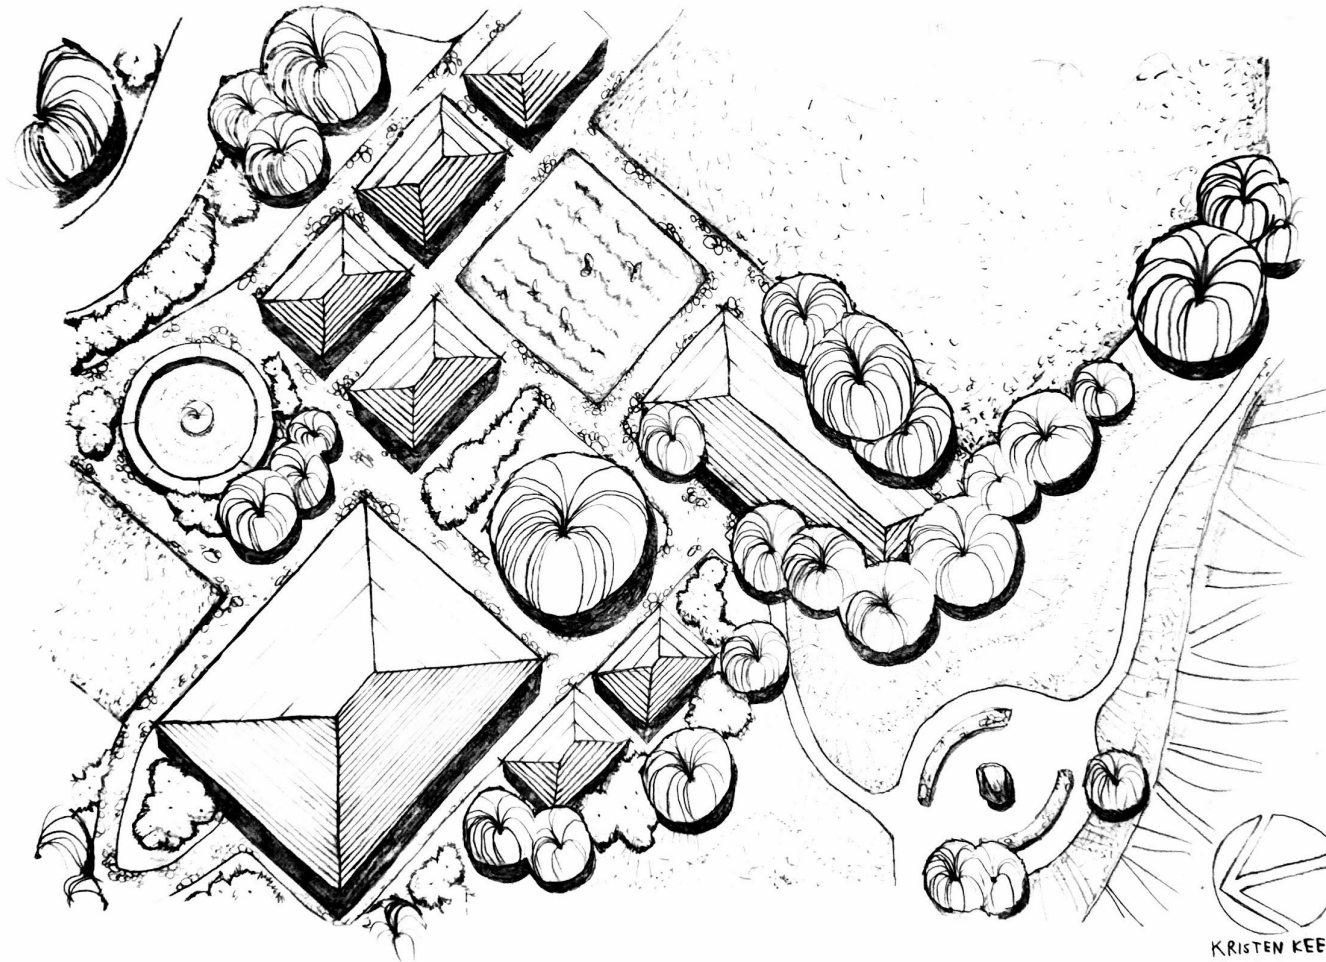

Project scope

- **Goal:** Design school campus along the central California coast for 175 developing owlets
- **Site mission:** *“Positively impact the personal and academic success of every student, every day”*
- **Requirements:** Grades 1-5 classes, kindergarten complex, turf + hardcourts, auditorium, amphitheater, garden, farm (+more)
- **Design notes / themes:** Inspired by CA coast and growth stages of owlets
 - *“Unique but united” – owlets hatch days apart and grow at their own pace; raptors at different stages share a nest*
 - *“Branching out” – before they can fly, owlets hop around on nearby branches to develop skills & learn new things*
 - *“Flap, fall, and fly” – when learning to fly owlets flap their wings for many weeks to build muscle, often falling many times*
 - *“Listen closely, look deeply” – owlets learn to sit very still and listen and observe with their special ears*
